Register your product at

Turning the TV On and Off

Press the POWER button on the remote control.
You can also use the POWER button on the TV.

Viewing the Menus

1 With the power on, press the MENU button.
The main menu appears on the screen.
The menu's left side has icons: Picture, Sound,
Channel, Setup, Input, Application.

2 Press the ▲ or ▼ button to select one of the icons.
Then press the ENTER button to access the
icon's sub-menu. Press the EXIT button to exit.

➤ The on-screen menus disappear from the
screen after about one minute.

Storing Channels in Memory
(Automatic Method)

1 Press the MENU button to display the menu.
Press the ▲ or ▼ button to select "Channel", then
press the ENTER button.

2 Press the ▲ or ▼ button to select "Auto Program",
then press the ENTER button.

3 Press the ▲ or ▼ button to select the antenna
connection, then press the ENTER button.

Auto Program
Select the Antenna source to memorize.
Air   Start
Cable   Start
Auto   Start
◆ Move ENTER Enter Return

4 When selecting the Cable TV system: Press the
ENTER button to start the auto program.

Press the ▲, ▼, ◄ or ► to select the correct analog
signal cable system source among "STD", "HRC",
and "IRC". Press the ▲ or ▼ button to select "Start",
then press the ENTER button. If you have Digital
cable TV, select the cable system signal source for
both Analog and Digital.

Auto Program
Selects the cable system.
Analog   STD   HRC   IRC
Digital   STD   HRC   IRC
Start
◆ Move ENTER Enter Return

5 The TV begins memorizing all available stations.
Press the EXIT button to exit.

Auto Program
Auto Program in Progress.
DTV Cable ► Cable ►   Cable 11
Stop
ENTER Enter Return
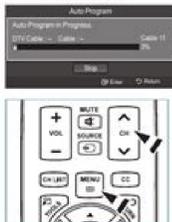

To Stop the Auto Program Function

Press the MENU button while the Auto Program function is
being executed. You can also press the ENTER button
to stop the setup.

Checking to see if Channels were Stored in Memory

Press the CH button. Only the channels stored in memory
will be selected (in order).

Selecting the antennas

• Air: "Air" antenna signal.
• Cable: "Cable" antenna signal.
• Auto: "Air" and "Cable" antenna signals.

Top three-column header lists

Statusanzeige (LEDs) für:
- Versorgungsspannung (Power)
- Schaltschwelle Überlast (> max)
- Schaltschwelle Unterlast (< min)
- Ausgang 1 (Out 1)
- Ausgang 2 (Out 2)
- Störung (Fault)
- Display zur Messwertanzeige, Diagnose und Menüführung
- Schaltspielzähler für K1 und K2
- Diagnose: U_{max} und I_{min}
- Anzeige der Betriebsstunden und Laststunden (rücksetzbar)
- Sicherung der Geräteparameter auf Chipkarte (write)
- Rücksicherung der Geräteparameter von Chipkarte (load)
- geeignet für den Einsatz an frequenzgeregelten Antrieben
- für Stromwandler geeignet

Status indicators (LEDs) for:
- Supply voltage (Power)
- Switching threshold for overload (> max)
- Switching threshold for underload (< min)
- Output 1 (Out 1)
- Output 2 (Out 2)
- Fault
- Display for measured value indicator, diagnostics and menu navigation
- Operating cycle counter for K1 and K2
- Diagnostics: U_{max} and I_{min}
- Display of operating hours and load hours (resettable)
- Device parameters can be saved to chip card (write)
- Device parameters can be restored from the chip card (load)
- Suitable for use with frequency-controlled drives
- Suitable for current transformers

Affichage de l'état (LEDs) pour les éléments suivants :
- tension d'alimentation (Power)
- seuil de commutation de surcharge (> max)
- seuil de commutation de sous-charge (> min)
- sortie 1 (Out 1)
- sortie 2 (Out 2)
- défaut (Fault)
- écran pour l'affichage de la valeur de mesure, du diagnostic et du menu
- compteur de manœuvres pour K1 et K2
- diagnostic : U_{max} et I_{min}
- affichage du temps de fonctionnement et du temps de charge (réinitialisable)
- enregistrement des paramètres sur carte à puce (write)
- restauration des paramètres sur la carte à puce (load)
- adapté à une utilisation sur des entraînements équipés de variateurs de fréquences
- utilisable avec des transformateurs d'intensité

Blockschaltbild / Block diagram / Schéma de principe
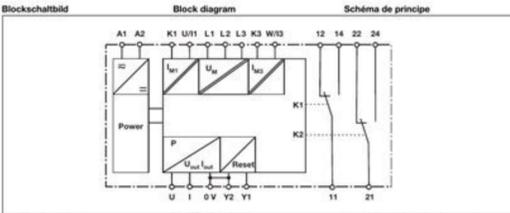

Funktionsbeschreibung

Das PMD s10 überwacht das Unter- und Überschreiten der Wirkleistung am 1- oder 3-Phasennetz unter ein DC-Netz. Das Gerät arbeitet nach dem Prinzip der Aronschaltung.

Relaisausgänge (K1 und K2)
K1 und K2 arbeiten nach dem Ruhestromprinzip. Dabei sind im Grundzustand die Hilfskontakte 11–12 und 21–24 geschlossen und die Hilfskontakte 11–12 und 21–22 geöffnet. Das Ruhestromprinzip ist die Default-Einstellung, diese Einstellung ist im Menü änderbar.

Analogausgänge (U_{out} und I_{out})
Das Gerät bildet zwei Ausgangssignale, die proportional zur Wirkleistung sind. Der Endwert entspricht P_{max} (siehe Funktionsdiagramm). Zusammen mit dem analogen Ausgangssignal wird der Zustand der Schaltschwellenüberwachung an den Hilfskontakten und den LEDs angezeigt. Die Hysterese der Schaltschwellen ist von 0 % … 50 % einstellbar.

Stromwandler CT:
Bei Dauerströmen ≥ 12 A muss die Messstrom über einen externen Stromwandler gemessen werden.

Funktion Po (K1 Überlast):
Wenn die ermittelte Wirkleistung die Schaltschwelle Po überschreitet, leuchtet LED „> max". Nach Ablauf der Reaktionszeit (t,) schaltet der Hilfskontakt (Default: Relais K1) um und die LED „Out 1" leuchtet.

Function description

The PMD s10 monitors the true power on a single, three phase or DC supply to ensure it doesn't exceed or drop below a certain value. The unit operates in accordance with the Aron circuit principle.

Relay outputs (K1 and K2)
K1 and K2 operate in normally energised mode. In their default state, auxiliary contacts 11–14 and 21–24 are closed and auxiliary contacts 11–12 and 21–22 are open. Normally energised mode is the default setting; this setting can be changed via the menu.

Analogue outputs (U_{out} and I_{out})
The unit forms two output signals which are proportional to the true power. The limit value corresponds to P_{max} (see timing diagram). The status of the threshold monitoring function is displayed at the auxiliary contacts and LEDs, along with the analogue output signals. The hysteresis of the switching thresholds can be set between 0 % … 50 %.

Current transformer CT:
With continuous currents ≥ 12 A, the measuring current must be measured via an external current transformer.

Po function (K1 overload):
If the measured true power exceeds the switching threshold Po, the "> max" LED is lit. Once the response time has elapsed (t,), the auxiliary contact switches (default: relay K1) and the "Out 1" LED is lit.

Description du fonctionnement

Le PMD s10 surveille une surcharge ou sous-charge de la puissance active monophasée ou triphasée ou sur un réseau DC. L'appareil fonctionne selon le principe du couplage Aron.

Sorties relais (K1 et K2)
K1 et K2 fonctionnent suivant le principe de l'action positive. En l'occurrence, à l'état initial, les contacts d'information 11-14 et 21-24 sont fermés et les contacts d'information 11-12 et 21-22 sont ouverts. Le principe de l'action positive est le réglage par défaut. Ce réglage peut être modifié dans le menu.

Sorties analogiques (U_{out} et I_{out})
L'appareil forme deux signaux de sortie proportionnels à la puissance. La valeur finale correspond à P_{max} (voir le diagramme fonctionnel). En plus des signaux analogiques, l'état de la surveillance des seuils de commutation est affiché par les contacts d'information et les LEDs. L'hystérésis des seuils de commutation peut être configurée de 0 % à 50 %.

Transformateur d'intensité CT :
En cas de courants permanents ≥ 12 A, l'intensité doit être mesurée à l'aide d'un transformateur d'intensité externe.

Fonction Po (K1 surcharge) :
Si la puissance active mesurée est supérieure au seuil réglé, la LED « > max » s'allume. Après écoulement du temps de réponse (t,), le contact d'information (par défaut : relais K1) commute et LED « Out 1 » s'allume.
